Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. An action on the merits of claims 1-10 considered readable on Species A (Figures 1-6)is included in this office action with claims 11-18 being withdrawn from consideration. 37 C.F.R. § 1.142(b). Election was made without traverse by way of the response filed 03/29/2004.
2. The submitted prior art has been considered and made of record on submitted Form PTO-1449.
3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
4. Claims 3, 7 and 9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

There is no clear antecedent basis for "the projection" of claim 3, lines 2-3.

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 1, 3, 5, 7, 9 are rejected under 35 U.S.C. 102(e) as being anticipated by Keil et al (US006672436).

See the bottom valve of Figure 3 of Keil et al. Re claim 3, note the projection on fixing member (bolt,nut) at 68.

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 2, 4, 6, 8, 10 rejected under 35 U.S.C. 103(a) as being unpatentable over Keil et al(US006672436) in view of Heckethorn(3321051).

The principal reference to Keil et al discloses the invention substantially as claimed. However, the principal reference to does not disclose the feature of the claims directed to the use of centering projections on the check valve.

The secondary reference to Heckethorn teaches providing the check valve disk 134 with centering projections 142(See Figure 9 and column 5, lines 43-52 of Heckethorn) for centering the check valve disk relative to the fixing member 138 in Figure 1 of Heckethorn.

It would have been obvious at the time the invention was made to one having ordinary skill in the art to which the invention pertains to modify the principal reference to Keil et al to include centering projections on the check valve as taught by Heckethorn in order to prevent undesirable movement of the check valve disk and to maintain the subassembled arrangement so as to provide for the continued proper functioning of the bottom valve.
